

# GGIRL Technologies and the Velvet Ecosystem

Current architecture, product naming, lifecycle status and public-claims boundaries for the GGIRL ecosystem.

|                  |                        |
|------------------|------------------------|
| Publisher        | GGIRL Technologies LLC |
| Version          | 1.1                    |
| Publication date | September 11, 2026     |
| Document type    | Current public record  |

## Current-record notice

This paper is the September 11, 2026 public architecture and status record. Earlier v1.0 papers remain available as dated historical documents and are not silently rewritten.

## 1. Scope and Version Authority

This document records the current public structure as of September 11, 2026. It does not replace or erase the dated July 30, 2026 v1.0 papers. When an older paper conflicts with current product naming or lifecycle status, this current record and the live product-status authority control present-day website claims.

Development status remains evidence-based. Public access, server-live work, phone proof, field proof, and full launch readiness are distinct states.

## 2. Company and Ecosystem Architecture

**GGIRL Technologies LLC** is the company. **Velvet** is the connected product and intelligence ecosystem. The products are purpose-built surfaces that may share approved identity, intelligence, communication, media, wallet/payment, and governance infrastructure without becoming one undifferentiated application.

**One company. One connected ecosystem. Distinct products with clear authorities.**

## 3. Current Product Map

|                               |                                                                                                                                                |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 01 - Good Girl Coin (\$GGIRL) | Live Solana digital asset. Broader ecosystem utility and participation rewards remain status-qualified by feature.                             |
| 02 - Velvet Wayz              | Active proof of concept with live-proven navigation components and continuing road/device validation.                                          |
| 03 - Velvet Direct Connect    | Standalone communication and outdoor-coordination product in active development; current core access is free while field acceptance continues. |
| 04 - Velvet Room              | Social, community, creator, relationship and professional platform in active development; not publicly launched.                               |

|                                        |                                                                                                                                            |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>05 - Velvet Eye</b>                 | User-facing AI presence and co-pilot in development with partially verified components.                                                    |
| <b>06 - Velvet Wallet + Velvet Pay</b> | One planned public product surface with two functions: user-controlled wallet capabilities and approved payment/settlement infrastructure. |
| <b>07 - Velvet Line</b>                | Communication and calling layer in development and partially implemented.                                                                  |
| <b>08 - Velvet Link</b>                | Planned / Roadmap relationship product. Current Radar and Winq mechanics remain part of Velvet Room.                                       |
| <b>09 - Velvet Studios</b>             | Current creator-production product with public development access through an installable PWA; active product validation continues.         |

## 4. Velvet Eye and the Deeper Intelligence Architecture

Velvet Eye is the current user-facing intelligence product. Its deeper memory, knowledge, orchestration and decision-processing architecture belongs inside Velvet Eye rather than being presented as a separate current product.

**Velvet Brain** remains a historical/internal architecture term for that deeper processing layer. Current public product navigation should lead users to Velvet Eye.

## 5. Current Naming and Product Boundaries

- **Velvet Studios** is the current creator-production product. Older dated records may use the former product name **Velvet Radio**. The radio/programming function remains within the Studios family.
- **Velvet Wallet + Velvet Pay** is one public product direction with separate wallet and payment functions, not two separate downloadable apps today.
- **Velvet Direct Connect** is a standalone product and is not merely a Velvet Wayz feature.
- **Velvet Link** is a planned standalone relationship product; existing Radar and Winq interactions remain Velvet Room mechanics until Link develops its own approved features.

## 6. Good Girl Coin Role

Good Girl Coin (\$GGIRL) is a live Solana digital asset connected to the evolving GGIRL ecosystem. Its current public role includes identity, culture and a planned company-funded participation-reward model. A token purchase is not intended to be required simply to qualify for an eligible participation reward.

The detailed participation-reward framework is published separately so product rewards can evolve without turning the token identity paper into a product-operations manual.

## 7. Public Claims Boundary

GGIRL public materials must distinguish **live asset**, **public development access**, **active proof of concept**, **in development**, **partially verified**, and **planned / roadmap**. Those stages are not interchangeable.

Public access does not by itself mean a product is finished, fully field-proven, universally available, or commercially complete. No product should be described as safer, more accurate, legally compliant, financially profitable, or launch-ready beyond the evidence and approvals that actually exist.

## 8. Verification and Related Public Records

The verification details below identify the current company, domain, token and public product-status destinations used by GGIRL Technologies LLC. They are provided to help visitors distinguish current authorities from dated historical materials.

### Historical archive policy

The July 30, 2026 v1.0 papers remain publicly available as dated records. They may use older product names or architecture descriptions that were accurate to that publication point. Current public claims should use the newest status-qualified authority rather than silently rewriting history.
