

Participation Rewards

A status-qualified framework for rewarding useful participation without requiring users to purchase Good Girl Coin to qualify.

Publisher	GGIRL Technologies LLC
Version	1.0
Publication date	September 11, 2026
Document type	Public development framework

Development status

This is the public framework for a planned/in-development reward system. It does not state that token rewards are currently active in every GGIRL product.

1. How Participation Rewards Work

GGIRL Technologies is designing participation rewards so useful contributions can receive more than a badge, thumbs-up or thank-you. Product-specific programs may recognize qualifying activity with achievements and, where the applicable rules are satisfied, Good Girl Coin (\$GGIRL) rewards.

The reward program is designed as participation recognition, not as a requirement to purchase the token or an invitation to invest.

2. Company-Funded Reward Model

GGIRL may fund approved reward programs from company-held Good Girl Coin reserves. Users are not intended to be required to purchase \$GGIRL simply to qualify for an eligible participation reward.

Each product may define its own qualifying actions, verification thresholds, reward amounts, limits, regions and availability. A qualifying action in one product does not automatically create a reward right in another product.

3. Velvet Wayz Report Reward Flow

1. Create	A user creates an eligible road/community report.
2. Pending verification	The report remains subject to the applicable verification rules; creation alone does not guarantee a reward.
3. Community evidence	Later users who encounter the location may confirm or dismiss the report. Those actions help determine whether the original report is accurate.
4. Decision	The system evaluates confirmations, dismissals and other applicable trust/anti-abuse rules.
5. Original reporter reward	If the report reaches the required verification threshold, the creator of the original qualifying report may become eligible for the defined Good Girl Coin reward and achievement recognition.

Confirming or dismissing another user's report does not, by itself, earn that report's creator reward. The confirmation/dismissal process is evidence used to determine whether the originating contribution deserves the reward.

4. Verification and Anti-Abuse

Reward eligibility must be resistant to spam, duplicate reports, coordinated manipulation and fabricated events. GGIRL may use duplicate detection, timing/location checks, community verification, account reputation, rate limits and other reasonable anti-abuse controls before an award becomes final.

Multiple reports of the same event do not necessarily create multiple full rewards. Product rules may identify an originating contribution and use later reports or confirmations as supporting evidence.

5. Reward Delivery and Program Terms

Reward delivery mechanics, wallet requirements, claim timing, minimums, limits, expiration rules, geographic restrictions and any identity or tax-information requirements will be published before live distribution where applicable.

Until those product-specific rules are active, public references to the participation-reward system must use planned/in-development language and must not tell users that a particular action is currently guaranteed to produce a token payment.

6. Digital-Asset and Availability Boundary

\$GGIRL is not promoted as an investment. GGIRL Technologies does not promise that purchasing, holding or receiving \$GGIRL will produce profit, appreciation, investment income or financial return. Digital assets can be volatile and may lose value.

Reward availability, reward amounts and future ecosystem uses may change. A company-funded reward program does not guarantee a market price, liquidity, exchange availability or future product launch.

7. Official Token Details

Name	Good Girl Coin
Symbol	\$GGIRL
Network	Solana
Company	GGIRL Technologies LLC
Official mint	374oftw5HUr2s8GMRr3ELq2aS77uRFcW7u3Br1iDmoon
Token identity	ggirltechnologies.com/whitepapers/good-girl-coin-identity-v1.html
Current ecosystem record	ggirltechnologies.com/whitepapers/ggird-technologies-velvet-ecosystem-current-v1-1.html
